

Palo Alto Networks PA-5200 Series ML-Powered NGFWs—the PA-5280, PA-5260, PA-5250, and PA-5220—are ideal for high-speed data center, internet gateway, and service provider deployments. The PA-5200 Series delivers up to 64 Gbps of throughput, using dedicated processing and memory, for the key unctional areas of networking, security, threat prevention, and management.

PA-5200 Series

PA-5260

The controlling element of the PA-5200 ML-Powered Next-Generation Firewalls (NGFW) is PAN-OS®, which natively classifies all traffic, inclusive of applications, threats, and content, and then ties that traffic to the user regardless of location or device type. The application, content, and user—in other words, the elements that run your business—then serve as the basis of your security policies, resulting in improved security posture and reduced incident response time.

Key Security Features

Classifies all applications, on all ports, all the time

- Identifies the application, regardless of port, SSL/SSH encryption, or evasive technique employed.
- Uses the application, not the port, as the basis for all your safe enablement policy decisions: allow, deny, schedule, inspect, and apply traffic-shaping.
- Categorizes unidentified applications for policy control, threat forensics, or App-ID™ technology development.
- Provides full visibility into the details of all TLS-encrypted connections and stops threats hidden in encrypted traffic, including traffic that uses TLS 1.3 and HTTP/2 protocols.

Enforces security policies for any user, anywhere

- Deploys consistent policies to local and remote users running on the Windows[®], macOS[®], Linux, Android[®], or Apple iOS platforms.
- Enables agentless integration with Microsoft Active Directory® and Terminal Services, LDAP, Novell eDirectory™, and Citrix.
- Easily integrates your firewall policies with 802.1X wireless, proxies, network access control, and any other source of user identity information.

Extends native protection across all attack vectors with cloud-delivered security subscriptions

- Threat Prevention—inspects all traffic to automatically block known vulnerabilities, malware, vulnerability exploits, spyware, command and control (C2), and custom intrusion prevention system (IPS) signatures.
- WildFire® malware prevention—protects against unknown file-based threats, delivering automated prevention in seconds for most new threats across networks, endpoints, and clouds.
- URL Filtering—prevents access to malicious sites and protects users against web-based threats.
- DNS Security—detects and blocks known and unknown threats over DNS while predictive analytics disrupt attacks using DNS for C2 or data theft.
- IoT Security—discovers all unmanaged devices in your network, identifies risks and vulnerabilities, and automates enforcement policies for your ML-Powered NGFW using a new Device-ID™ policy construct.

Table 1: PA-5200 Series Performance and Capacities ¹				
	PA-5280	PA-5260	PA-5250	PA-5220
Firewall throughput (HTTP/appmix) ²	56/64 Gbps	56/64 Gbps	38/40 Gbps	15.6/20 Gbps
Threat Prevention throughput (HTTP/appmix) ³	26/31.5 Gbps	26/31.5 Gbps	17/21 Gbps	7.2/8.9 Gbps
IPsec VPN throughput ⁴	27 Gbps	27 Gbps	18 Gbps	10 Gbps
Max sessions	64M	32M	8M	4M
New sessions per second ⁵	450,000	450,000	297,000	133,000

^{2.} Firewall throughput is measured with App-ID and logging enabled, utilizing 64 KB HTTP/appmix transactions.

^{3.} Threat Prevention throughput is measured with App-ID, IPS, antivirus, anti-spyware, WildFire, file blocking, and logging enabled, utilizing 64 KB HTTP/appmix transactions.

^{4.} IPsec VPN throughput is measured with 64 KB HTTP transactions and logging enabled.

 $^{5.\} New \ sessions \ per \ second \ is \ measured \ with \ application-override, \ utilizing \ 1 \ byte \ HTTP \ transactions.$
